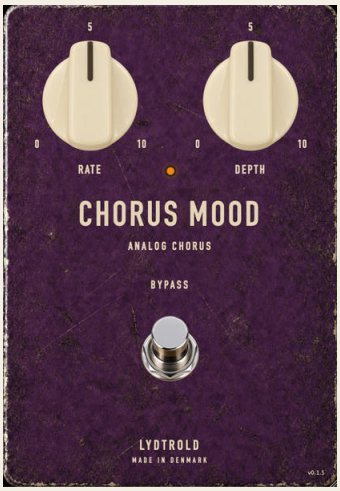
01 / START HERE

Meet Chorus Mood

A free analog-style chorus with Rate, Depth and Bypass controls for gentle movement and deep modulation. Native and AAX DSP formats for Mac and Windows.



Your first session

1. Insert on guitar, keys or a sustained stereo source.
2. Start with low Depth and a slow Rate, then increase movement until it supports the arrangement.
3. Check the processed sound in mono as well as stereo.

02 / REFERENCE

Controls and behaviour

Names follow the front panel; alternate host parameter names are included where useful. Ranges describe control values, not recommended settings.

CONTROL	RANGE / OPTIONS	HOW TO USE IT
Rate	0-10	Sets the speed of the chorus movement; the scale is a control position, not a tempo division.
Depth	0-10	Sets modulation intensity. Higher settings produce more obvious pitch movement.
Bypass	On / Off	Compares the chorus with the unprocessed signal.

03 / IN PRACTICE

Workflows and troubleshooting

Gentle doubling

Keep Rate and Depth low to thicken a sustained part without drawing attention to pitch movement.

Animated texture

Increase Depth and Rate for an obvious modulation effect; contrast it with an unprocessed part.

If the result is unexpected

Pitch sounds unstable. Reduce Depth or slow Rate.

Sound changes in mono. Use less modulation and judge the mono result in context.

04 / INSTALLATION AND SESSIONS

Install, recall and get help

Download and install

Visit https://lydtrold.com/installer and download the public Lydtrold Installer for your platform. Close your DAW before installing or updating. For AAX, Pro Tools must be fully closed. Enter the licence key associated with your purchase or Free Collection, select the product and required formats, then install.

Choose the format

Use AU in compatible Mac hosts, VST3 in compatible Mac or Windows hosts, or AAX Native in Pro Tools. The AAX DSP edition runs on compatible Pro Tools HDX systems and includes the Native formats. Select the edition covered by your licence.

System compatibility

The public Mac plug-ins support Intel from macOS 10.15 and Apple silicon from macOS 11. The current public Mac installer requires macOS 12 or later. Use a compatible 64-bit DAW and check the product page for current platform and format availability.

Recall and automation

Save the DAW session and use supported host presets to retain parameter settings. Automate sound controls exposed by the installed edition in the host. Display-only meters and analysis results are not sound parameters. Save a preset before resetting or making major changes.

Support

Visit https://lydtrold.com/contact. Include the product name and installed version, operating system, DAW version, plug-in format and relevant routing. Describe the steps that reproduce the problem and the expected result.

Manual edition 1.0, 26 October 2026. Covers the public product version shown on the cover. Manual editions and plug-in versions are separate. Illustrations show the published product interface.
